

#### HOW WE WORK

## From First Conversation to Ongoing Support

### 01 Consultation

Understand the business challenge and requirements.

### 02 Analysis

Understand the workflow and identify practical technology opportunities.

### 03 Development

Build the solution around agreed requirements.

### 04 Implementation

Put the developed solution into practical use.

### 05 Support

Support improvement and maintenance as requirements evolve.

#### WHY CLIENTS CHOOSE US

Innovation

Expertise

Customer-focused approach

Quality & Reliability

Cost-effective solutions

## WHO WE ARE

# A Technology Partner Built for Practical Value

SKY QUANTECH AI is a technology company focused on helping organizations explore and apply artificial intelligence, software and automation to real-world business challenges.

Our approach combines technology capabilities with an understanding of practical business requirements, allowing solutions to be shaped around the needs of each organization.

Rather than introducing unnecessary technical complexity, we emphasize dependable execution, clear maintainable design, and practical digital initiatives that support genuine operational goals.

## INDUSTRIES WE WORK WITH

Healthcare

Education

Manufacturing

Retail

Finance

Government

## SOLUTIONS

# Four Ways We Help Organizations Use Technology

### 01 AI Solutions

Artificial intelligence and computer vision built around practical business needs, turning complex information into usable insight.

### 02 Asset Management

Technology that helps organizations organize asset information, keep digital records and improve workflow visibility.

### 03 Automation

Workflow and business process automation that reduces repetition and lets teams focus on higher-value work.

### 04 Technology Consulting

Choosing and applying the right technology for the problem, with roadmaps shaped around operational requirements.

**One approach, different technologies.** The right solution starts with understanding the problem. Technology is selected and applied according to the requirements of the organization.

## APPLIED WORK

# AI Applied to Real-World Inspection

From railway infrastructure to rolling stock and power-grid assets, AI and computer vision can help transform visual inspection into structured digital intelligence.

### OHE Inspection

Railway overhead equipment imagery analysed to identify components and visual conditions.

### Rolling Stock Inspection

High-speed visual inspection of rolling stock assemblies.

### Power Grid Inspection

Drone-based inspection of transmission infrastructure in remote terrain.
